Alert

You are about to purchase a product that is not simple and may be difficult to understand

What is this product?

Type

This document is not specific to a particular product but it relates to products known as “Contracts for Difference on currency pairs” or “CFDs on FOREX”. A CFD is a tradable instrument that allows you to obtain an indirect exposure to an underlying asset or instrument, in this case a currency pair - also known as “Forex pair”. CFDs are tradable instruments that allow you to obtain an indirect exposure to an underlying asset (see below). CFDs are leveraged products, enabling investors to make transactions with only a small margin (deposit). As per regulation the maximum leverage we can offer to retail Clients is 1:30 on CFDs for Major Currency Pairs and 1:20 for CFDs on all other currency pairs.

The underlying asset is never actually owned by you and your profit or loss is determined by the difference between the buying and the selling price of the CFDs, minus any relevant costs (detailed below). You will make gains or incur losses as a result of price movements in the underlying asset.

Underlying Asset

CFDs on FOREX, have different currency pairs as underlying assets.

Major Currency Pairs: The Majors are the most popular currency pairs, formed from such currencies as USD, EUR, GBP, CHF, JPY, and CAD. They are most liquid trading instruments, which means traders will find the lowest spreads when trading these pairs.

Minor Currency Pairs: The Minors are pairs which mostly consist of crosses of the majors. They are less liquid than majors but are quite popular amongst traders.

Exotic Currency Pairs: The Exotic pairs are not as widely traded as the Majors and Minors as they are less liquid, making the cost of trading them higher. These currency pairs usually consist of one major currency, and a currency from a developing economy.

The first currency listed in a Forex pair is called the base currency, and the second currency is called the quote currency (each currency pair is listed as a three-letter code). The price of an FOREX pair is how much one unit of the base currency is worth in the quote currency. If the base currency rises against the quote currency, then a single unit of the base currency will be worth more units of the quote currency and the FOREX pair's price will increase. If it drops, the FOREX pair's price will decrease.

So how do CFDs work?

CFDs on FOREX are traded Over-The-Counter (OTC). When you enter into any order to Buy or Sell a CFD on one of our trading platforms, you trade with us as your counterparty. We are your Principal to each trade that you enter. Therefore, if your trade is profitable, we lose. If your trade is loss making, we earn a profit. Our profits or losses may be reduced by the level of hedging we may undertake to contain our trading risk.

The price of the CFDs is derived from the price of the underlying currency pair. An investor has the choice to buy (or go “long”) the CFDs on EUR/USD to benefit from rising EUR/USD prices; or to sell (or go “short”) the CFD on EUR/USD to benefit from falling EUR/USD prices. For instance, if an investor is long on CFDs on EUR/USD and the price rises, the value of the CFD will increase - at the end of the contract the investor will make the difference between the closing value of the contract and the opening value of the contract. Conversely, if an investor is long and the price of the underlying currency pair falls, the value of the CFD will decrease - at the end of the contract the investor will lose the difference between the closing value of the contract and the opening value of the contract. The leverage embedded within all CFDs has the effect of magnifying both profits and losses. You will never lose more than the Equity of your trading account as we offer Negative Balance Protection. For more information, please refer to our [Order Execution Policy](#).

Objectives

The objective of trading CFDs on FOREX is to speculate on price movements (generally over the short term) in an underlying currency pair, without actually buying or selling the underlying currency pair. Your return depends on movements in the price of the underlying currency pair and the size of your position. Through your trading with us, you receive the exposure to the performance of the specific currency pair you choose, but you do not receive any ownership or other rights to underlining currencies.

Intended retail investor

Trading in this product is highly speculative and involves a significant risk of loss. This product is for clients with a relatively short-term investment horizon, and is not suitable for all investors but only for those who: i) understand and are willing to bear the risks involved, including the risks associated with margin trading; ii) possess the necessary experience and knowledge about trading in derivatives and the underlying assets and have for objective hedging and speculation over a short term, and iii) are financially able to bear the risk of a total loss of their invested amounts, subject to the negative balance protection mechanism offered by the Company.

Trading CFDs on FOREX carries high level of risk and thus can generate great profits as well as great losses. You should never invest more than you are willing to lose, as it is possible to lose your initial investment.

Prior to commencing trading in CFDs on FOREX it is prudent to consult with this KID and evaluate whether trading in CFDs in FOREX is appropriate for you.

Term

CFDs on FOREX generally have no expiration date and therefore it is up to you to open and close your position.

As per regulation we are required to close one or more of a retail investor's open CFD positions when the sum of funds in the CFD trading account and the unrealised net profits of all open CFDs connected to that account falls to less than half of the total initial margin protection for all those open CFDs.

What are the risks and what could I get in return?

Risk Indicator

Lower Risk

Higher Risk

Typically lower
rewards

Typically higher
rewards

1	2	3	4	5	6	7
---	---	---	---	---	---	---

Signification of the indicator

This indicator measures the level of risk at which your investment may be exposed. The risk category is not guaranteed and may shift over time. The lowest category does not mean «risk-free». The CFDs on FOREX display a grade of 7 on a scale ranging from 1 to 7 (1 being the less risky category). They therefore exhibit (because also of leverage) the highest risk characteristics. This product does not include any protection from future market performance so you could lose all of your investment.

The Client could place Stop Loss order to limit potential losses and/or Take Profit order to collect profits.

If we are not able to pay you what is owed, you could lose your entire investment. However, you may benefit from the Investor Compensation Fund (see the section 'what happens if we are unable to pay you').

The indicator shown above does not consider this protection.

General CFD risks

- CFDs are complex financial instruments and are traded Over the Counter ("OTC"). You can only exit a position by trading with us, during the trading hours of the underlying instrument as stated on our [Website](#). You cannot transfer your open positions/trades to any other firm. It may be impossible to liquidate an existing position, to assess the value of the position arising from an off-exchange transaction or to assess the exposure to risk.
- You do not own the underlying asset. Through your trade with us, you receive by us the exposure to the performance of the underlying asset, but you do not receive any ownership or other rights to such underlying asset.
- CFDs are leveraged products. You need a small margin for getting exposure to the underlying asset. Leverage can magnify both your profits as well as your losses. Statistically, because of leverage, a significant part of clients loses because leverage amplifies losses, leading to margin calls and closures of clients' open positions. We operate a Negative Balance Protection i.e. you cannot lose more than the Equity of your trading account, however you risk losing the capital invested with us.
- CFD trading is undertaken on electronic platforms. There may be times that system or other breakdowns arise. This may affect your ability to trade, or our ability to offer continuous prices or create a need for subsequent adjustment of prices to reflect underlying exchange prices.
- CFDs on certain instruments can be highly volatile. The prices of CFDs and the underlying instruments may fluctuate rapidly and over wide ranges and may reflect unforeseeable events or changes in conditions, none of which can be controlled by us. Under certain market conditions it may be impossible for a Client's order to be executed at the declared price leading to losses.
- Prices of CFDs as well as their commercial terms like the spreads maybe varied to reflect periods of actual or expected heightened market volatility.
- Depending on the currency your trading account is denominated and the currency of the underlying instrument you trade, your final return maybe exposed to the exchange rate risk between the two currencies.
- The tax legislation of your home Member State may have an impact on your return.
- The above list of risks is non-exhaustive. For the Company's [Risk Disclosure Policy](#) please visit the Company's [Website](#).

Performance Scenarios

The performance scenarios represent general situations of changes in the prices of CFDs in FOREX and their impact on the return of the Client's investment in monetary and percentage terms. These scenarios are general and applicable to the range of CFDs on currency pairs offered by the Company.

The example below involves Buying 1 lot ("volume") of EUR/USD currency pair, with Contract Size 100,000 Euro, using leverage of 1:10. Deposit in the account is 50,000 EUR. Margin required for this transaction is: Volume * Contract Size/Leverage = 1* 100,000/10 = 10,000 EUR.

Scenario	Invested (EUR)	Open Price	Close Price	One day swaps	Net Profit/Loss (EUR)	% change in equity
Favourable	10000.00	1.2000	1.2061	-10	496	5%
Moderate	10000.00	1.2000	1.2038	-10	290	3.00%
Unfavourable	10000.00	1.2000	1.1942	-10	-499	5%
Stress	10000.00	1.2000	1.1882	-10	-1007.00	10%

The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products.

The scenarios presented are an estimate of future performance and are not exact indicators.

Your profits and losses will vary depending on how the underlying market performs and how long you keep the position open.

The figures do not take into account your personal tax situation, which may also affect how much you can make. This performance scenario assumes you only have one position open, and does not take into account the negative or positive cumulative balance you may have if you have multiple open positions with us.

Market developments in the future cannot be accurately predicted. The scenarios shown are only an indication of some of the possible outcomes based on recent returns. Actual returns could be lower.

What happens if the Company is unable to pay out?

For CFDs on underlying assets, in case of our financial default you may seek compensation from the Investor Compensation Fund (“ICF”) of Cyprus Investment Firms. The maximum compensation is Euro 20,000 irrespective of number of account held. ICF Rules apply, including with respect to your categorization and eligibility. In general, retail clients are covered by the ICF.

Fees and Charges

- The charges you pay are used to cover the costs of our operational activities, including the costs of obtaining market / price data from the underlying exchanges, the staff costs, our regulatory license costs, our funding costs as well as the marketing and distribution costs.
- We may also have trading gains from the trades that you enter with us.
- We do not pay any interest on any clients’ money you may have in your account with us. Please consult your own advisor to understand the nature of our below costs and charges:

One-off Cost at the time of your trade	Spreads	Spread is the difference, usually indicated in pips, between the Bid and Ask price and reflects, in part, the spread of the underlying stocks. The spread values vary for different accounts and depends on the volatility and liquidity of the underlying assets. Please refer to our Website for more information on the spreads cost of which may be substantial.
On-going costs	Swaps	Swaps are the fees for keeping the position opened over-night. Swaps for the opened positions are calculated at 23:59:59 – 00:00:00 (EET), Monday to Friday. These are ongoing fees for as long as you have open trades with us. Swap rates are based on market interest rates, which may vary from time to time and are subject to changes according to Company’s liquidity providers’ rates. Forex pairs open positions will carry a triple swap charge every Wednesday in MT5. Swap rates for different instruments can be found on our website . <u>Please see our swap calculation formula below:</u> Number of lots x Contract size x Swap rate x Number of nights = Swap value. Example: 1 x 1000 X -0.00128 x 3 = -3.84
Incidental cost	Inactivity fee	Inactivity fee is charged after the inactivity of 1 months: 15 USD or equivalent in other currency per month.
	Currency conversion rates	Investing in CFDs with an underlying asset listed in a currency other than your base currency entails a currency risk, due to the fact that when the CFD is settled in a currency other than your base currency, the value of your return may be affected by its conversion into the base currency.

How long should I hold it and can I take money out early?

- You can only exit an open trade by exiting the trade, only with us, during the trading hours of the market of the underlying asset being made available by us on our [Website](#)
- This product generally has no fixed term and you decide when to close your position. You should monitor the product to determine when the appropriate time is to close your position(s). If your margin level reaches or falls below the Margin close out level of 50% your position will start liquidating, without notice by us to you, starting with the highest losses.
- You can request to withdraw your money at any time. We will process all withdrawal requests within 24 hours irrespective of payment method.

How can I complain?

You are entitled to submit a complaint at any time, where you may feel that our service has not met your satisfaction. Where any trading or other query has not been addressed or when you wish to submit a formal complaint at the initial or a subsequent stage, you can do so by completing the [Online Complaint Form](#). If you are not satisfied with our response to your complaint you can refer your complaint to the Financial Ombudsman of the Republic of Cyprus. For more information please visit <http://www.financialombudsman.gov.cy>

Other relevant information

We recommend to read the [Terms and Conditions](#). For any questions regarding the KID or any other documents please contact us through the [Contact Us](#) page.
